### WATERPROOFING WITHOUT CREATING POSITIVE SLOPE AND CORRECTING WATER PONDS

**When only waterproofing of the deck by using deck coating occurs without creating proper positive slope, any dips, low areas and negative slope will greatly enhance the creation of ponds on the newly waterproof deck. It is always recommended that water ponds are filled and positive slope is created.**

**Slope to drain and the filling of pond areas are corrected by using the Poly-Tuff Sand Slurry and should be considered where there is any chance of water ponding or the existence of negative slope both for the longevity of the waterproofing and because ponding water creates a potential slip hazard for the tenants.**
